

LABORATORY TEST REPORT

Patient Name : Arpita Vishwakarma	Registered On : 28/10/2021,01.00 PM	Received On : 28/10/2021, 3.21 PM
Lab No. : MU216R281021009	Collected On : 28/10/2021,12.58 PM	Reported On : 28/10/2021,07.46 PM
Age/Gender : 4 Years /Female		Report Status : FINAL
Ref. Doctor : Self		
Centre Code : MU216R		

Real time PCR detection of SARS – CoV2 (COVID 19)

PARAMETERS	VALUE
Real time PCR detection of SARS – CoV2 (COVID 19)	
Specimen Type	Nasopharyngeal Swab/ Oropharyngeal Swab
Result	NOT DETECTED
Method : Real Time PCR	
CT Value of RdRp gene	NA
CT Value of N gene	NA
INTERPRETATION:	
DETECTED: RNA specific to SARS-CoV-2 Detected in received sample.	
NOT-DETECTED: RNA specific to SARS-CoV-2 not Detected in received sample.	
If the Ct value of RdRp gene is <= 30 and N gene is <= 30 ,interpret as positive and If the Ct value of RdRp gene is >= 30 and N gene is >= 30 or NA ,interpret as negative	
NOTE: The ICMR registration code of H S Pathology Private Limited for COVID 19 testing is HSPATHPLTMH	
1) Negative result does not rule out the possibility of COVID-19 infection. Presence of inhibitors, mutations and insufficient RNA specific to SARS-CoV-2 can influence the test result. Kindly correlated the results with clinical findings. A negative result in a single upper respiratory tract sample does not rule out SARS-CoV-2 infection. Hence in such cases a repeat sample should be sent. Lower respiratory tract samples like Sputum, BAL, ET aspirate are appropriate samples especially in severe and progressive lung disease.	
2) COVID-19 Test is conducted as per kits approved by ICMR / CE-IVD / USFDA, an in-vitro PCR for the single or multiple detection of three types of target genes of SARS-CoV-2 (E gene, ORF 1ab gene and N gene)	
3) Kindly consult referring Physician / Authorized hospitals for appropriate follow up.	
INDICATIONS: 1) Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV).	
2) SARS-CoV-2 is a new virus strain that was first reported in December 2019 in China and has not been previously identified in humans, that causes Coronavirus Disease (COVID-19).	
3) Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome and kidney failure.	
DISCLAIMER: 1) The above result relate only to the specimens received and tested in laboratory and should be always be correlated with clinical Findings and other laboratory markers.	
2) Improper specimen collection, handling, storage and transportation may result in false results.	

path_pramodpcr	End Of Report	Page 1 of 1
Results relate only to the sample as recieved. Kindly correlate with clinical condition		

Note : If the test results are alarming or unexpected, Client is advised to contact the laboratory immediately for possible remedial action.

Sample Type : VTM

Sample ID MBA40502
